DESCRIPTORS: *Liquefied gases, Density, *Argon,
*Methanes, *Nitrogen, Molecular association, Volume,
Mathematical analysis, Solutions.

The densities of solutions of condensed gases Ar---CH₄
and N₂---CH₄ were measured. The volumes of these
solutions were found to be nonadditive. A correlation
was established between the excess volume of mixing,
on the one hand, and the energy of mixing and com-
pressibility of the solution, on the other. The experi-
mental results were compared with theoretical values,
satisfactory agreement being achieved. (Author)
